Nauber Bench Dispenser 6080

Industrial bench dispenser with transverse blade for straight cutting of tesa self-adhesive tapes

Product description/ Application:

The 6080 dispenser is universally applicable for most types of tesa self-adhesive tapes, particularly cloth tapes, paper tapes and filament tapes.

The dispenser can be installed on a bench or mounted on a wall (4 screws are supplied).

Operating instructions:

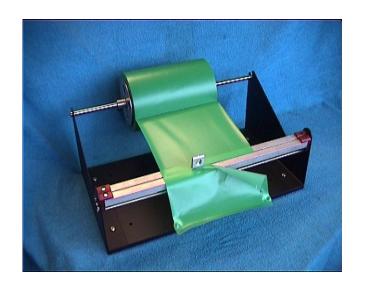

The desired length of tape is pulled off and placed on the cutting rim. The blade must be in one of the end positions. The sliding bar is pulled across and the tape is cut smoothly and clean by the transverse blade. The cut tape is now ready for use.

The dispenser can accommodate one wide or two narrow rolls of tape.

In order to insert the tesa-roll the core holder must first be removed. Pull off the movable wing mandrel, place the roll of tape on the fixed core holder and then replace the mandrel. Now the tape, together with the core holder, can be inserted in such a way that the adhesive side of the unwinding tape faces downwards

Technical data:

Core diameter:	76 mm
Roll diameter:	max. 190 mm
Roll width:	upon request

Spare part list

Recommendations for maintenance and repairs:

Blade

Adhesive residues are easy to remove with acetone.

The transverse blade can be renewed by releasing the blade screw In order to do this, the front cover plate must be removed (easily unhinged).
